

The diagram illustrates a smart grid architecture. At the bottom, a box labeled "UEDCL Grid" is connected to a vertical line. This line branches out to various components: three houses at the top, each with a smart meter; a stack of three houses with smart meters; a stack of three more houses with smart meters; a server rack with a LoraGateway below it; and a battery storage unit with a smart meter. A legend on the right identifies the icons: Smart Meter, inverter, and LoraGateway.
